

Sprayguard® for BIOLOGICAL protection

The times we are going through raise various issues about biological protection. Indutex responds by presenting

protective garments.

Manufactured with the material Puntiform®, they have passed the tests prescribed by EN14126:2003, which combines specifications for biohazard protection with requirements for protection against hazardous chemical agents, according to their different classifications.

Test	EN 14126:2003	
	Value	class
Synthetic blood under hydrostatic pressure	20 KPa	6 of 6
Bloodborne infectious agents (Phi-X 174)	20 KPa	6 of 6
Penetration of infectious agents by contact	> 75 min.	6 of 6
Biologically contaminated aerosols	0 micro-organisms	3 of 3
Biologically contaminated powders	0 micro-organisms	3 of 3

The garment is certified to
 CHEMICAL PROTECTION category 3 type 4-b
 BIOLOGICAL PROTECTION according to standard EN14126:2003
 NUCLEAR PROTECTION according to standard EN 1073-2
 and has ANTISTATIC properties meeting the requirements of standard EN 1149-1

Protective clothing (PPE) has the purpose of protecting the wearer's body (in a complete manner if suitable ventilated fully encapsulated protective suits are worn, or else by providing limited protection to the specific area for which the garment was designed as in the case of overalls, jackets or sleeves). In the different specifically designed forms and types, it is intended to prevent the hazardous agent from coming into direct contact

with the skin by acting as an effective barrier against the agent itself.

The capacity and flexibility of the working method acquired by the company have enabled it to gear its production toward the requirements of end users and develop custom solutions combining a maximum level of protection with the right degree of comfort, as demanded by those who work every with protective clothing.
